

IPLL: Assignment 3

Submitted By:

Vedant Shah (2001010115)

Mansi (200101064)

Readme:

The zip file contains:

1. A3_31.c
2. A3_31.l
3. Makefile
4. A3_31.nc
5. Readme :)

Commands to run:

1. To run the lexer, give the following commands:

make

make test

2. This would create lex.yy.c , a.out and output.txt
3. The file output.txt contains the tokens for the sample nanoC code in the file A3_31.nc
4. To run any other test file, change the makefile, replace the new test file with A3_31.nc
5. Use **make clean** before running any other test file.
6. We have implemented an interactive lexer.

=====Thank You :)=====
